

WEEK 4 – POWER BI EDA REPORT

Shopify Stock Analysis

- Dharshini M (E25DA012)

1. Introduction

In Week 4, I worked on Exploratory Data Analysis (EDA) for the Shopify stock dataset using Power BI. I created moving averages, interactive charts, slicers, a parameter selector, and a custom tooltip.

2. Moving Averages

I created 20-day SMA and 50-day SMA using DAX. These moving averages were used to understand the stock price trend.

3. Price Trend Chart

I created a price trend chart using Close Price, 20 SMA, 50 SMA, and Date. I also enabled the continuous date axis and zoom slider for easier analysis.

4. Trading Volume

I created a volume visual using Trading Volume and Volume 20 SMA. I also created a conditional color measure to highlight higher-volume periods.

5. Slicers and Parameter

I added a Date Range slicer using Between mode, a Relative Date slicer, and a Price Parameter with Close Price, High Price, Low Price, and Open Price. These features make the dashboard interactive.

6. Stock Tooltip

I created a Stock_Tooltip page and added cards for Open Price, High Price, Low Price, Close Price, Trading Volume, and Daily Return %. I then connected the tooltip page to the main price chart so the details appear when hovering over the chart.

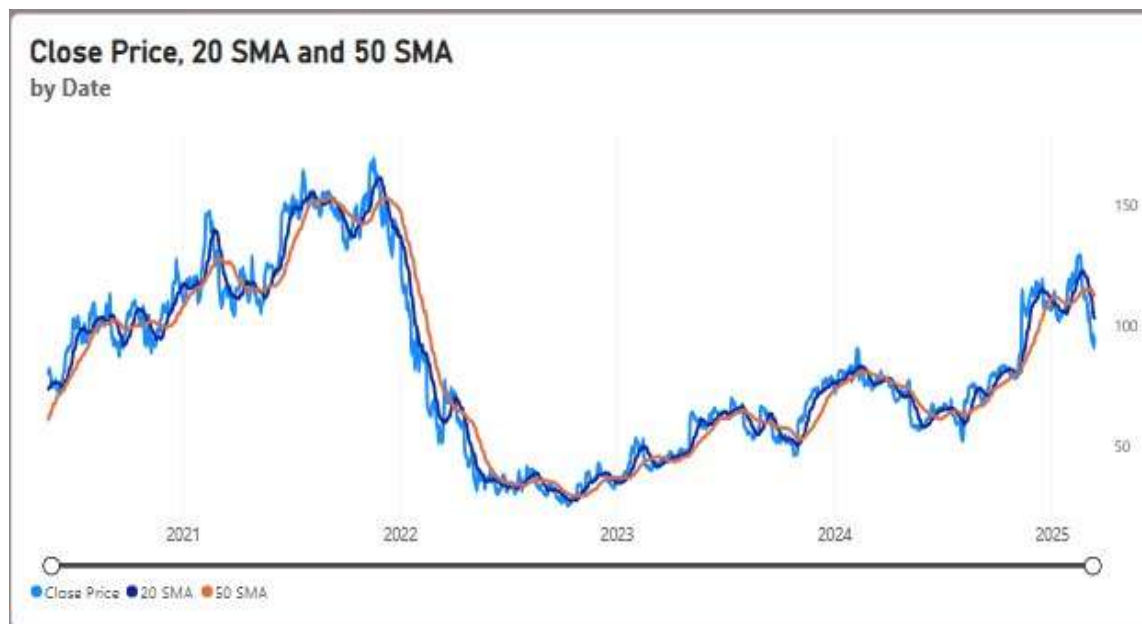

7. Conclusion

This week, I completed the main Power BI EDA dashboard with interactive charts, slicers, price parameters, and a custom stock tooltip.
